- Available with standard (non-threaded) or tapped 4-40 connector mounting holes
- RoHS Compliant

E & EH Series Wall Plates

E & EH Series Wall Plates from Switchcraft® are the perfect solution for anyone requiring custom connector configurations on standard size wall plates. Options include single and double gang with 0, 1, 2, and 4 connector holes. Plates are available in brushed stainless steel or anodized black aluminum and with standard or tapped 4-40 connector mounting holes. Tapped 4-40 connector mounting holes allow connectors to be screwed directly into the plate without the use of a nut (front mount only).

Any combination of Switchcraft® E and EH Series panel mount connectors are compatible, providing the most customizable line of audio, video, and data connectivity available for standard size wall plates.
